# Company Admin: Dashboard, Profile, Operations & Pages

A detailed breakdown of everything the Company Admin (Ramesh, owner of Ramesh Furniture) sees and does on the SaaS finance platform (MARKGO).

---

## *1. Dashboard Page*

The dashboard is the “first look” page — a summary of the whole company's health at a glance.

- Total Income vs Total Expense (this month / this year) — usually a big number or chart
- Profit & Loss snapshot — is the company making money or losing money right now
- Total Invoices — how many raised, how many paid, how many overdue/unpaid
- Total Bills — how much Ramesh owes his vendors, how much is paid
- Cash/Bank balance — how much money is actually in the bank account(s)
- Recent transactions — latest 5–10 sales/purchases
- Charts/graphs — income vs expense trend over months (bar or line chart)
- Quick stats cards: Total Customers, Total Vendors, Total Products, Total Staff

Real-world parallel: like opening your bank app — first screen shows balance + recent transactions, not every single detail.

## *2. Profile Page*

This is Ramesh's own account/company settings page — not customer or vendor data.

- Personal info: Ramesh's name, email, phone, profile photo, password change option
- Company info: Company name, logo, address, GSTIN/tax number, currency, business type
- Subscription/Plan details: which plan he's on (Free/Paid), renewal date, upgrade button
- Company preferences: default currency, date format, invoice number format, fiscal year start
- Notification settings: email alerts for overdue invoices, low stock, etc.

Real-world parallel: like the “Account Settings” page on Amazon Seller Central — your business details, not your customers' details.

## *3. Operations, Work & Management by Company Admin*

Ramesh, as Company Admin, is basically the owner running the whole shop remotely through the software.

| Category | What he does |
|---|---|
| Team management | Invite/remove Accountant & Staff, assign roles/permissions |
| Customer management | Add/edit/delete customers, view their purchase history |
| Vendor management | Add/edit/delete vendors, view what's owed to them |

| Category | What he does |
|---|---|
| Product management | Add products/services, set prices, track stock |
| Sales management | Create/view invoices, mark as paid, send reminders |
| Purchase management | Create/view bills from vendors, record payments made |
| Banking | Add bank accounts, record deposits/withdrawals, transfer money between accounts |
| Reports | View P&L, Balance Sheet, Trial Balance, tax/GST reports |
| Settings | Company details, tax rates, currencies, invoice templates, payment gateway setup |
| Subscription | Upgrade/downgrade plan, see billing history with the SaaS platform |

## *4 & 5. Sidebar Pages / Buttons and What Each Does*

| Sidebar Page | What it's for |
|---|---|
| **Dashboard** | Overview summary (as above) |
| **Customers** | List of people who buy from Ramesh; add new customer, view invoice history, send invoice links |
| **Vendors** | List of people Ramesh buys from; add new vendor, view bills owed to them |
| **Products & Services** | Catalog of everything Ramesh sells — name, price, tax, stock quantity |
| **Invoices** | Create a bill for a customer (sale); track paid/unpaid/overdue; send reminders |
| **Bills / Expenses** | Record what Ramesh owes vendors (purchase); mark as paid |
| **Payments Received** | Log of money customers have paid in |
| **Payments Made** | Log of money paid out to vendors |
| **Bank Accounts** | Add company's bank accounts, record transfers, do bank reconciliation |
| **Reports** | Generate P&L, Balance Sheet, Trial Balance, Ledger, Tax Summary |
| **Team / Users** | Invite Accountant/Staff, assign what they can and can't do |

| Sidebar Page | What it's for |
|---|---|
| **Taxes** | Set up GST/tax rates used across invoices and bills |
| **Settings** | Company profile, invoice number format, currency, payment gateway keys (Razorpay/Stripe) |
| **Subscription / Billing** | See current plan, upgrade, payment history to the SaaS platform itself |

In short: **Customers + Invoices** = money coming in, **Vendors + Bills** = money going out, **Bank + Reports** = the truth about where the company stands, and **Team + Settings** = running the account itself.

---

Notes for the MARKGO build: each of these pages maps to a Prisma model/table scoped by companyId, with COMPANY_ADMIN having full CRUD access and other roles (ACCOUNTANT, STAFF) getting restricted permissions on the same tables.
