MarkGo - Simple MVP Plan

Only the important pages and the important work for each dashboard. Built to be simple and fast.

Golden Rules to Keep It Simple

Rule	What it means
One invoice flow	Customer + Products = Invoice. Vendor + Products = Bill. Everything else is extra.
Reuse pages	Accountant and Staff use the same pages as Company Admin. Just hide buttons by role instead of building new pages.
Manual payments first	Admin or Accountant clicks 'Record Payment'. Add Razorpay/Stripe only after the core works.
Skip for now	Bank reconciliation, payroll, approval limits, multi-currency, stock tracking, bulk import/export, bulk actions, granular permissions.
Soft delete only	Use Active/Inactive status. Never hard delete anything linked to an invoice or bill.

1. Company Admin Dashboard

Page	Important work only	Status
Dashboard	4 cards: Total Receivable, Total Payable, This Month Sales, This Month Expenses. List of 5 recent invoices.	To build
Customers	Add, edit, search, list, active/inactive, send invite link.	Done
Vendors	Add, edit, search, list, active/inactive.	Done
Team (Staff + Accountant)	Add, edit, list, active/inactive, resend invite. One page with a role filter is enough.	Done
Products & Services	Add, edit, search, list, active/inactive. Fields: name, type (Product/Service), price, tax %, unit, description. No stock tracking.	Next
Invoices	Create (pick customer, add items, auto total + tax), list, view/print PDF, record payment, status: Draft / Sent / Paid.	To build
Bills / Expenses	Create (pick vendor, amount, date, category), list, record payment, status: Unpaid / Paid.	To build
Reports	Only 2: Sales report (by date range) and Outstanding report (who owes you / whom you owe).	To build
Settings	Company profile, logo, invoice number prefix, default tax %.	Done

2. Accountant Dashboard

Page	Important work only
Dashboard	Same 4 summary cards as Company Admin.
Invoices	Create, edit (only if Draft), record payment, view/print.
Bills / Expenses	Create, edit, record payment.
Reports	View Sales and Outstanding reports.
Customers / Vendors / Products	View list and add new. No delete.

Cannot access: Team page, Settings, delete actions.

3. Staff Dashboard

Page	Important work only
Dashboard	Own numbers only: invoices I created, total amount, pending amount.
My Invoices	Create invoice, list only the invoices I created, view/print.
Customers	View list and add new customer.
Products & Services	View only, needed for picking items in an invoice.

Cannot access: Vendors, Bills, Reports, Team, Settings, record payment.

4. Vendor Dashboard (optional, build late)

Page	Important work only
Dashboard	3 cards: Total Billed, Total Paid, Pending Payment.
My Bills	List of bills raised against this vendor. View details and download PDF. Read only.
Payments Received	List of payments the company made to this vendor.
Profile	View and edit own contact and bank details.

Tip: if you want to save time, keep Vendor as a record with no login at all. Company Admin manages it. Add this portal at the end.

5. Customer Dashboard

Page	Important work only
Dashboard	3 cards: Total Invoiced, Total Paid, Outstanding Amount.
My Invoices	List with status (Paid / Unpaid), view details, download invoice PDF.
Payment History	List of payments made. Online 'Pay Now' with Razorpay comes in phase 2.
Profile	View and edit own contact and billing address.

Who Can Do What (quick matrix)

Feature	Admin	Accountant	Staff	Vendor	Customer
Customers page	Yes	View + Add	View + Add	-	-
Vendors page	Yes	View + Add	-	-	-
Products page	Yes	View + Add	View	-	-
Create invoice	Yes	Yes	Own only	-	-
Create bill	Yes	Yes	-	-	-
Record payment	Yes	Yes	-	-	-
Reports	Yes	View	-	-	-
Team + Settings	Yes	-	-	-	-
See own invoices	-	-	-	-	Yes
See own bills	-	-	-	Yes	-

Minimum Database Tables (10 total)

Table	Purpose
Company	The business account. Everything belongs to a company.
User	Company Admin, Accountant, Staff (role field decides access).
Customer	People you sell to (has own login).
Vendor	People you buy from.
Product	Products and services (type = PRODUCT or SERVICE).
Invoice + InvoiceItem	A sale: customerId, date, status, total. Items: productId, qty, price, tax.
Bill + BillItem	A purchase: vendorId, date, status, total. Items: productId or plain description, amount.
Payment	One table for both: links to an invoice or a bill, amount, date, method.

Build Order (do it in this sequence)

Step	What to build	Why now
1	Products & Services page	Invoices and bills need it.
2	Invoices + Record Payment + PDF print	Core value of the whole product.
3	Bills / Expenses	Same logic as invoices, just copy and adapt.
4	Company Admin Dashboard + 2 reports	Simple queries on data you now have.
5	Customer Dashboard	Customers already have login. Mostly read-only pages.
6	Accountant + Staff dashboards	Reuse admin pages and hide buttons by role.
7	Vendor Dashboard (optional)	Lowest priority.
8	Online payments (Razorpay first)	Only after everything above is stable.

Your Customer, Vendor, Team and Settings pages are already done, so you are roughly one third through this plan. Next step is Products & Services, then Invoices.
